

2008 ARMY GREATEST INVENTIONS (AGI)

One-System Remote Video Terminal (OSRVT) A-Kit

Two technologies saving Soldiers' lives on today's battlefields were designed by TARDEC and were among 10 innovations recognized for 2008 AGI honors. One is the OSRVT A-Kit, a package invention that provides all the necessary OSRVT components neatly, ergonomically and without blocking any emergency egress paths on multiple Stryker vehicle variants. The A-kit's major components consist of a ceiling mount radio bracket, a Ku-C/L-band antenna switcher and mounting bracket, and antenna and power cables. Soldiers with OSRVTs have higher situational awareness and can use the data to plan missions and respond to enemy activity more efficiently.
