This half day program will deliver information on how companies developing innovative technology can do business with the United States Army, Tank Automotive Research, Development and Engineering Center (TARDEC) and the National Automotive Center (NAC).

The dual-use SBIR Program's goal is to tap into the small business community's innovativeness and creativity to help meet government R&D objectives. At the same time, these small companies develop technologies, products and services that they can then commercialize through sales in the private sector or back to the government.

This program will provide an overview of the following Department of Defense offerings:

- The Small Business Innovation Research (SBIR) program
- The Cooperative Research & Development Agreements (CRADA)
- Select 2012 DoD SBIR Topics
